ASSIGNMENT-1

HOME NETWORK TOPOLOGY

Home LAN

WiFi Access Point

As seen from above diagram, a home network consists of wired & wireless end stations, a wireless access point, Layer 2 switch & Layer 3 Router.

The end station can communicate ~~other~~ from one station to another end to end station in home.

Layer 2 Switch provides connectivity between the different end station in home.

Wireless Access point is required for connecting the wireless station to the L2 switch.

A L3 Router connects the home network to the public data network by connecting to a local ISP.

L3 is used to connect different networks by connecting to a local ISP.

All data packets going from the home network to the Internet. Coming from the Internet to the home network.

L3 Router would typically have an Ethernet LAN interface that connects to the internal home.
