

NAME: SHAIRI FARHAN
Reg No: 2141006001

ASSIGNMENT-1

Software Development Life Cycle (Phases)

1. Requirements

- Understand what the client or user need
- Stakeholders interviews, documentation view,
- A strong foundation ensures you're building the right solution

2. Design

- Plan how the System will work and look.
- Architecture Planning, UI/UX mockups, Database Scheme
- A good design prevents costly changes later.

3. Implementation

- Turn design into a working system
- Programming, code review, version control.
- This is where the product is built - accuracy & efficiency are critical.

4. Testing

- Ensure the Software works as intended
- Unit testing, integration testing, user acceptance
- Helps catch bugs before users do

5. Deployment

- Deliver the product to user
- Release management, environment setup
- A Smooth deployment ensures users get value without disruption
